Hopper, Curb Cameras

RFID Reader — ID

Driver Behavior Cameras

Lift Sensor

Mechanical & Hydraulics

Body Scale

Tire Pressure Monitors

Engine, Telemetry & Diagnostics

CANBus

Onboard Computer Smart Display

FleetMind
A Safe Fleet Brand

WasteApp™

When used in conjunction with the FleetLink Vision+ computer, or the FleetLink Mobile Lite ruggedized tablet, WasteApp provides solid waste haulers with an automated solution for service provision, documentation, and, ultimately, billing. WasteApp supports residential, commercial, and roll-off workflows.

FleetLink Vision/Vision+

FleetLink Vision and Vision+ are on-board computing (OBC) solutions designed for tough environments and more discerning requirements. With FleetLink Vision and FleetLink Vision+, solid waste collection organizations have 360-degree visibility of their fleets and the progress of their operations in real-time.
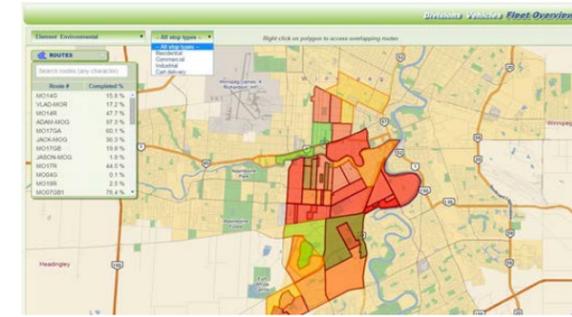

FleetLink Mobile DVR

FleetLink Mobile DVR is the full-featured digital video recording (DVR) and camera solution that enables solid waste vehicles to capture video inside and around the vehicle. It's the perfect solution for solid waste haulers that don't need service verification (as with FleetLink Vision+), but still want to capture important events in and around the vehicle, as well provide enhanced safety during vehicle operation.
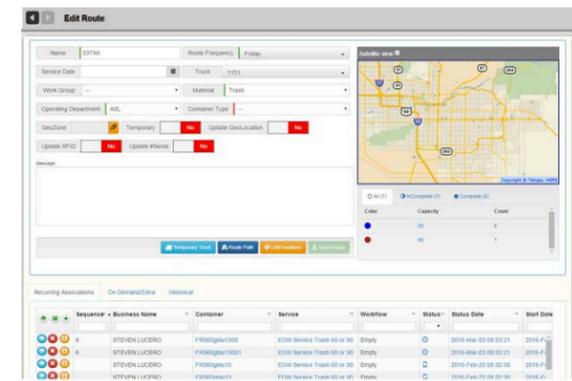

FleetLink Web

FleetLink Map delivers real-time and historical views into your fleet, driver, and collection services activity. You gain an intuitive back-office view into what's going on for each route, truck and driver.

FleetLink Route System

FleetLink Route System provides management tools for collection services activity, billing, and customer services issues. You benefit from efficient route scheduling and dispatching, and real-time service quality monitoring.
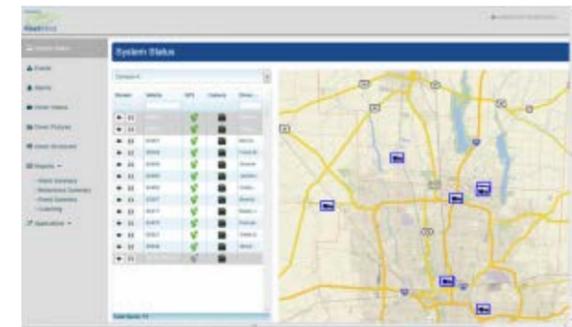

FleetLink Reports

FleetLink Reports provides operations and performance statistics by tracking your company's most important key productivity indicators. You gain complete visibility into all information at a company level, down to the driver level.

FleetLink Safety Dashboard

FleetLink Safety Dashboard™ provides live video feeds, archived videos, and picture views into your fleet, driver, and collection activity. It offers an intuitive back-office view into what's going on for each route, truck and driver.

About FleetMind

FleetMind is North America's leading fleet management systems provider for solid waste management organizations with thousands of onboard computing systems installed at many of North America's top waste haulers.

FleetMind combines its extensive industry expertise with practical, leading-edge technology to approach fleet management issues in a holistic and fully integrated manner. FleetMind features an end-to-end offering that includes all the key components required to run solid waste and recycling fleets more efficiently and sustainably – onboard computers, route management software, automated service verification, fleet mapping and tracking, driver direction, RFID tracking, camera systems and more.

FleetMind's "smart truck" technology is the result of 20 years and millions of dollars of investment in developing the industry's best and most advanced solutions specifically designed for solid waste management fleets. FleetMind solutions are field-proven to deliver measurable sustainable benefits.

Innovation is not a buzzword at FleetMind – it is our primary competitive differentiator and our corporate mission.
