

FleetLink Route Management System

Real-Time Routing and Dispatch

FleetMind's powerful route management solution allows dispatchers to maximize efficiency while saving time and money for smarter route planning.

- Track Route Progress in Real-Time
- Dynamic Fleet Routing and Dispatching
- Monitor Customer and Driver Activity
- Plan Multi-Stop Routes
- Improve Customer Service

FleetMind's web-based route management solution adds a new level of support and insight to dispatch operations for industrial, residential and commercial waste collection services.

Combined with FleetLink Mobile real-time fleet tracking and turn-by-turn driver directions, FleetLink Route System takes the guesswork out of managing routes to make sure that vehicles implement designated routes to minimize the distance, amount of fuel used, and amount of time required to complete assignments. The result is total visibility into route progress, greater driver accountability and improved customer service.

FleetLink Route System can be deployed as a stand-alone dispatch solution or integrated with existing back-office systems to manage routing activities. Additionally, all required data in comma-separated-value (CSV) files can be easily imported into management databases for speedy integration and use.

Features:

- Faster, accurate results using automated route sequencing
- Track route progress, location in real-time
- Create sequenced routes with multi-stop planning
- Dynamic dispatch
- Easily re-assign routes between drivers using real-time
- Import route data from a CSV file
- Generate smarter more dynamic routes based on GeoZone screens
- Maintain cart inventories
- Manage cart assignments and status
- Manage roll-off dispatch for industrial services
- Create add-ons, extras, and on-demand tasks
- Advanced reporting and analysis

Benefits:

- Increased productivity and profitability
- Improved service delivery
- Respond quickly to changing conditions
- Reduced fuel consumption
- Decreased travel time
- Happier customers
